PROJECTS

Idle Memory Reclamation and Overcommitment on Cloud Container Platform

- A part of my work during the internship at Alibaba (as a part of my paper published in SoCC'22).
- Improved the memory utilization by around 10% in multiple Alibaba's data centers without impacting the CPI (cycles per instruction, the metric that reflects a program's performance) of latency-sensitive services.

AlphaRTC (Reinforcement-learning-based Network QoS Management in Real-time Communication)

- A part of my work during the undergraduate internship at Microsoft Research Asia.
- Improved Microsoft's real-time video communication system's network bandwidth estimation model. The RTC's QoS was improved by 72% in *ISP* scenario, 55% in *Burst Loss* scenario.
